Introduction to Avail's Weichert Performance Metrics

avail
move management™
Complete control of every move.

Overview

Each quarter, Weichert generates a scorecard measuring the performance of WTS. Within that scorecard are key performance indicators that measure the customer service team and the agency network.

Avail's role with Weichert includes measuring the agency network against a similar scorecard.

In order for you to manage the performance of your agency, Avail has partnered with Audit & Information Services to provide you with a site that allows you to monitor your performance on-demand. Having access to the agency scorecard KPIs allows you to manage your performance as frequently as you're able.

Background

- The WTS team is working to improve the number of post-move evaluations (PME) returned. When looking at today's data, keep in mind that the rate of return on evaluations is low, so the KPIs solely attributed to a PME could be skewed.
- We're all in this together, and in some cases will be measured as such. For example:
  - A customer satisfaction score as it relates to the move itself will be attributed to the OA, hauler and DA on that shipment. If you're not the only agent involved in that shipment, the feedback as it relates to the overall move does impact each agency's customer satisfaction score.
  - Conversely, you may see feedback about the CSR involved on a shipment; questions related to the CSR aren't included in your agency's customer satisfaction score.
- Each of your agency location's results (unless managed separately) are combined in your site.
- The default timeframe for the dashboard and reports is based on load date, 6 months to-date.

Dashboard

The dashboard is a quick view of useful KPIs that make up the agency scorecard.

- **KPI Breakdown**
  - This graph combines like qualitative comments from the Weichert PME. Hover on a section to see the category name and percentage; click to see the full comments. *Use this graph to see trends in customer feedback not captured by the post-move evaluation questions.*
- **Customer Satisfaction Ranking**
  - This table shows your external customer satisfaction ranking based on performance on question 9 of the Weichert PME. The "Rank" column tells you how this compares to other agents in the network. *Use this table as a quick view of your customer satisfaction score and to benchmark your customer satisfaction against the network scores.*
- **Agent Ranking by Network Scorecard**
  - This table displays your score for all the scorecard metrics for the time period selected (default is 6 months to-date). The "Rank" column tells you how this compares to other agents in the network. *Use this table as a quick view of your overall performance and to benchmark your overall performance against the network scores.*

Dashboard

- **Fleet Rating Questions Breakdown**
  - This table shows questions 4-8 from the Weichert PME and your agency's score by question. 1=Strongly Agree, so the closer to one the score, the better. Remember too, everyone is sharing in this metric no matter if you were the OA, hauler or DA on the shipment. *Use this table to measure performance on each question related to crews, PVOs.*
- **Use WTS Again?**
  - This graph's source is question 10 on the Weichert PME. *Use this question to measure how your involvement in shipments affected the overall likelihood that the customer would use WTS again.*

Survey Results

- The Survey Results page allows you to view the actual PME data. You will see a PME if your agency was involved in the shipment.
- On the far left side of the screen, select “Search Criteria”. This defaults to 6 months to-date based on load date. There are many options to filter survey results within the search criteria.
- On the top left of the results grid, click “Excel” to export results.
- On the top right, as you type in the Search box, results automatically filter.
- Clicking any column header will sort by that column.
- Clicking “detail” will show the full PME.

Scorecard Metrics & Calculations

- When clicking on Scorecard, use "Search Criteria" to the left to adjust dates to look at performance for a certain time period.
- Each measurement can be derived from multiplying the value found for each metric by the corresponding weight (see slide 9 or hover over each performance measure to see the weighting levels), determining your actual value. The actual value corresponds to a success rate, which totals to get your overall agency network score out of 100.
- Scorecards may be exported to Excel or PDF in the top right corner of the scorecard itself.
- **External Customer Satisfaction**
  - This score comes from the average of the answers to question 9 on the Weichert PME. Strongly Agree and Agree responses earn 100%, while Disagree and Strongly Disagree earn 0%. That total is divided by number of answered survey questions. Any survey returned on a move your agency was a participant in will be included in this calculation. PME results can be viewed on the Survey Results page.
- **Claim Cost Per Move**
  - Claims reporting is on a 6 month lag. Unirisc sends a report monthly that will be uploaded to display updated claim cost per move values. Any claim present on a move your agency was a participant in will be included in this calculation. Until claims data is available in the Avail site, please contact Avail for specific details on claims in question.
- **On-Time Performance**
  - The on-time performance is based on shipments your agency was involved in. This data comes directly from Dispatch data, and is the percentage of actual dates that fall within agreed dates.
- **QA Site Visits**
  - Is calculated by taking the average of moves that have a QA stop divided by the total number of moves your agency participated in. The WTS team provides Avail a monthly spreadsheet detailing shipments that have a QA stop performed, based on their knowledge of the QA form completion and upload into the shipment. Until the detail behind the QA stop percentage is included in the Avail site, please contact Avail. Please contact your WTS coordinator for further details if a performed QA stop isn't recorded.

Scorecard Metrics & Calculations

- **Agent Fleet Rating**
  - The total you see is average from questions 4-8 on each survey, using a 100% for Strongly Agree or Agree, and 0% for Disagree or Strongly Disagree. That total amount is divided by the number of answered survey questions. Any survey returned on a move your agency was a participant in will be included in this calculation . PME results can be viewed on the Survey Results tab.
- **Shipment Acceptance**
  - The shipment acceptance ratio is the percentage of times your agency accepted a shipment and provided service to that shipment. Anything less than 100% means that your agency turned back a shipment(s) after acceptance without a change in circumstance that prevented service. The WTS team keeps track of turnbacks to calculate this score. Please contact Avail for the shipments contributing to this score, and your WTS coordinator for further details if a shipment is in question.
- **Self-Haul Ratio**
  - The self-haul ratio is the percentage of shipments your agency acted as OA and hauler on the shipments assigned. This information comes directly from Dispatch data when a member of your agency family is listed as OA and hauler.
- **Estimate Accuracy**
  - Estimate accuracy is calculated by finding the variance in estimated and actual weight of each shipment. Actual weight must be within 20% higher or lower from the estimated weight. Your score reflects shipments in which your agency acted as the OA. This information comes directly from Dispatch data.

Scorecard Targets & Weights

External Customer Satisfaction	
Metric Result	Weight
95%	0.25
94%	0.23
